Solution. Both measures satisfy the following characterization of the Lebesgue measure: (a) translational invariant and (b) the measure of the unit square is 1. See an exercise in last semester. Note. The de nition of the product measure of nitely many measures can be done like the n= 2 case. One can also show that L nL m= L+m: (9) Fix a 1 = 0 ...

Solution to Exercise 3 - CUHK Mathematics

The suggestion for the second graph in Ex 3.7.5 is not quite correct. It seems that ..prop.. calculates proportions of color within cut, so stacking these yields proportions that can exceed 1 (for example, the total proportion for "Ideal" is presented as ~2.8.. To present the plot to be consistent with that in Part 1 (so that the height of the 'Ideal' bar is 0.4), the following can be used:
