Solution Of Thermodynamics Gaskell

Zeroth law of thermodynamics defines temperature. First law connected heat and work and clarified conservation of energy in all systems. The key new energy term that developed from the first law is internal energy. Internal energy often has a nice physical significance; sometimes, its significance is less apparent.

Thermodynamics is concerned only with the equilibrium state of matter and not in the rate at which matter reaches the equilibrium state. Early thermodynamics was on heat (thermo) and work (dynamics) effects. In heat engines with gases and liquids, equilibrium is often reached very fast and the rate of reaching equilibrium is very fast.
