Before we describe the solution of these equations, let's discuss the word linear. To say that an equation is linear is to say that if we have any two solutions  $y_1(x)$  and  $y_2(x)$  of the equation, then  $c_1y_1(x) + c_2y_2(x)$  is also a solution of the equation, where  $c_1$  and  $c_2$  are any two constants (in other words, the set of solutions forms a vector space).

"numerical analysis" title in a later edition [171]. The origins of the part of mathematics we now call analysis were all numerical, so for millennia the name "numerical analysis" would have been redundant. But analysis later developed conceptual (non-numerical) paradigms, and it became useful to specify the different areas by names.
