Hardness is a measure of the resistance to localized plastic deformation induced by either mechanical indentation or abrasion. Some materials (e.g. metals) are harder than others (e.g. plastics, wood) [citation needed]. Macroscopic hardness is generally characterized by strong intermolecular bonds, but the behavior of solid materials under force is complex; therefore, there are different ...

1. Introduction. Currently, there is considerable interest in the field of high-entropy alloys (HEAs) not only due to their configurational entropy-driven phase stability of massive solid solutions [1] and in part good mechanical properties [2] but also because they open up a practically infinite compositional space for future solid solution alloy development [3,4].

In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately below it.

MWS Wire entered the medical industry in 1976 when it developed a two strand wire for a Temporary Atrial Pacing Electrode. Today, MWS produces specialty wire solutions that are incorporated into intravascular ultrasound imaging systems, intracardiac ablation catheters and systems, intracardiac mapping catheters, cardiac rhythm products, spinal cord stimulators, endoscopic therapeutic devices ...

The stress-strain behaviour of extruded AA6xxx and AA7xxx aluminium alloys in T6 temper was studied at a wide range of strain rates. Tensile tests at low to medium strain rates were performed in a standard tensile test machine, while a split-Hopkinson tension bar was used to carry out tests at high rates of strain.
