Physical examination. Physical examination starts with inspection. It is easy to detect muscle atrophy of the infraspinatus viewing from the back of the patient because the infraspinatus is located just under the skin, whereas the supraspinatus is covered by the trapezius (Fig. 1). Atrophy of the shoulder muscles is a common finding in patients with rotator cuff tears.

### **Manual Muscle Testing: Shoulder Flashcards | Quizlet**

Measured with a goniometer, the magnitude of the shoulder shrug was defined as the angle between the arm and the horizontal point at which the shrug moment began. Test rationale: the authors conclude the shrug sign can detect shoulder abnormalities, especially those associated with loss of range of motion or weakness on manual muscle testing.
