The problems will also be selected from this book. It is crucially important for students to solve problems independently. The problems will be placed on the course homepage. The same page will contain solutions of the problems. So if a student is not able to solve the problem without assistance, then she/he should come through the solution.

Thermodynamics and statistical mechanics are two aspects of the study of large systems, where we

cannot describe the majority of all details of that system. Thermodynamics approaches this problem from the observational side. We perform experiments on macroscopic systems and deduce collective properties

Statistical Mechanics - About

The development of statistical mechanics also grew out of the kinetic theory of gasses. Daniel Bernoulli (1700-1782) accounted for the pressure exerted by a gas on the walls of its container in terms of collisions of molecules against the wall.
