Back to top of Section 4 4.1 Elements of Fission Weapon Design. 4.1.1 Dimensional and Temporal Scale Factors. In Section 2 the properties of fission chain reactions were described using two simplified mathematical models: the discrete step chain reaction, and the more accurate continuous chain reaction model.

For a given event, the cross section σ is given by. $\sigma = \mu/n$. where. σ is the cross-section of this event [m^2]; μ is the attenuation coefficient due to the occurrence of this event [m^{-1}]; n is the density of the target particles [m^{-3}].; In nuclear physics, the nuclear cross section of a nucleus is commonly used to characterize the probability that a nuclear reaction will occur.
