780: Intro to Lasers - Department of Physics

Principles and Applications of Laser. It is a device that creates a narrow and low-divergent beam [1] of coherent light, while most other light sources emit incoherent light, which has a phase that varies randomly with time and position. Most lasers emit nearly "monochromatic" light with a narrow wavelength spectrum.

Principles and Applications of Laser - MSE 5317

(a) The laser beam has only a slightly larger diameter at 10m distance from the laser and the laser power is of the order of 1W. (b) Assuming that the luminescence radiation is emitted isotropically, the power reaching an area of 1cm diameter is $P \sin^2 \theta$, where θ is the angle corresponding to the area. It follows that $\theta \approx 10^{-4}$...

In Laser Physics the interaction of radiation and matter, and the principles of laser operation are treated at a level suitable for fourth-year undergraduate courses or introductory graduate courses in physics, chemistry or engineering. The factors which determine efficiency, wavelength coverage, output power, and beam quality of the different classes of laser are treated both in terms of ...
