Solution: Suppose the number has n digits, all k 's. If n is even, then $k - k + k - k + \dots + k - k = 0$ is divisible by 11, so the number is. If n is odd, then $k - k + k - k + \dots - k + k = k$ which is not divisible by 11. So a number whose digits are all the same is divisible by 11 if and only if it has an even number of digits.

Number theory. In contrast to other branches of mathematics, many of the problems and theorems of number theory can be understood by laypersons, although solutions to the problems and proofs of the theorems often require a sophisticated mathematical background. Until the mid-20th century, number theory was considered the purest branch of mathematics,...
