Answer to first problems on page 3. Solution: Once again, the sample size was 10, so we go to the t-table and use the row with 10 minus 1 degrees of freedom (so 9 degrees of freedom). But now you want a 90% confidence interval, so you would use the column with a two-tailed probability of 0.10. Looking down to the row for 9 degrees of freedom, you get a t-value of 1.833.

4.1 Solution For this problem, I have used the concept of rotating the coordinate system. If  $(x, y)$  be the current coordinate system, then we can rotate the coordinate  $(x', y')$  to get a new system  $(x'', y'')$  where the lines will not be horizontal or vertical.
