Of the 624 exercises in Statistical Inference, Second Edition, this manual gives solutions for 484 (78%) of them. There is an obtuse pattern as to which solutions were included in this manual. We assembled all of the solutions that we had from the first edition, and filled in so that all odd-numbered problems were done.

This is a course about statistical inference, concentrating on the two leading contemporary paradigms (Frequentist and Bayesian), and introducing others (fiducial, likelihoodist, etc.). Theories of point and interval estimation and testing are introduced, and their properties (efficiency, consistency, sufficiency, robustness) are studied.

Statistical inference is a process of drawing general conclusions from data in a specific sample. Typical inferential problems are: Does alternative A give higher return than alternative B? Is drug A more effective than drug B? In both cases solutions are based on observations in a single sample.
