Analyzing a Static Equilibrium Situation. If an object is at rest and is in a state of equilibrium, then we would say that the object is at "static equilibrium." "Static" means stationary or at rest. A common physics lab is to hang an object by two or more strings and to measure the forces that are exerted at angles upon the object to support ...

For all solutions, let T_1 be the cable on the left and T_2 be the cable on the right. The sign always has weight (W), which points down. The sign isn't going anywhere (it's not accelerating), therefore the three forces are in equilibrium. Describe this state using the language of physics — equations; in particular, component analysis equations.

Static Equilibrium - Solutions to Problems

Statics is the physics that treats objects at rest or objects in constant motion. In this module, we will review the first condition for equilibrium (treated in Part 5A of these modules); then we will extend our treatment by working with the second condition for equilibrium. Both conditions must be satisfied for true equilibrium.

Cats and Planks: Static Equilibrium Problems and Solutions When an object is in Static Equilibrium, we don't have any linear or angular acceleration: $a = 0$ and $\alpha = 0$. This means: The name of the game is to pick directions and axes to generate equations to allow you to find desired variables. Let's do some practice: 1.
