In algebra, the Abel–Ruffini theorem (also known as Abel's impossibility theorem) states that there is no solution in radicals to general polynomial equations of degree five or higher with arbitrary coefficients. The theorem is named after Paolo Ruffini, who made an incomplete proof in 1799, and Niels Henrik Abel, who provided a proof in 1824.

In mathematics, a field is a set on which addition, subtraction, multiplication, and division are defined, and behave as the corresponding operations on rational and real numbers do. A field is thus a fundamental algebraic structure, which is widely used in algebra, number theory and many other areas of mathematics.. The best known fields are the field of rational numbers, the field of real ...

The flow map $x \mapsto F(x)$ and the jump map $x \mapsto G(x)$ are set valued; C is the flow set and D the jump set. This model describes a wide variety of phenomena while its simple structure facilitates the development of both a stability theory for hybrid systems and procedures for the design of hybrid control systems.
