The red differentials above indicate the variable used in the integrand: "x" in the left-hand integral, "u" in the right-hand integral. The red "dx" does not actually cancel with its black counterpart, although it might appear that way. The illusion of cancelling does provide a handy device to remember the formula, however!

A function which satisfies Laplace's equation is said to be harmonic. A solution to Laplace's equation has the property that the average value over a spherical surface is equal to the value at the center

of the sphere (Gauss's harmonic function theorem). Solutions have no local maxima or minima.
