The general plan is to work through the textbook Principles of Mathematical Analysis (3e) by Rudin. More specifics to follow as the class progresses. I am also listing as a reference the textbooks Analysis I, Analysis II by Terence Tao. The course structure and homework will follow Rudin, however I recommend Tao's books if you have time to read them.

"numerical analysis" title in a later edition [171]. The origins of the part of mathematics we now call analysis were all numerical, so for millennia the name "numerical analysis" would have been redundant. But analysis later developed conceptual (non-numerical) paradigms, and it became useful to specify the different areas by names.
