The structure of glass is the essential question in glass science. One obvious difference between glass and other condensed matter is the vitreous supercooled liquid state between the molten liquid state and the crystalline state.

The structure of glass: A phase equilibrium diagram approach

Glass is a non-crystalline, amorphous solid that is often transparent and has widespread practical, technological, and decorative uses in, for example, window panes, tableware, and optoelectronics. The most familiar, and historically the oldest, types of manufactured glass are "silicate glasses" based on the chemical compound silica (silicon dioxide, or quartz), the primary constituent of sand.
