Python Exercises with Solutions | pynative

Exercise 1.1. The optimization is unconstrained and the cash position is deduced from the budget constraint. The risky asset weight solves the problem of question 1 with $\mu - rf$ in place of μ. The residual amount of wealth (positive if wealth is high, negative if wealth is low) is invested in the riskless asset.

Solutions to Exercises - investmentmath.com

What you call solution reminds me of the solutions section at the end of the Textbook, but it is rather called Key than "solution". Plus solution meant as "answer" is too general, since solution can be the "answer" to a problem and not just to an exercise.

word choice - Answer or solution to an exercise? - English ...

Solutions to the Exercises Chapter 1 Solution 1.1 (a) Your computer may be programmed to allocate borderline cases to the next group down, or the next group up; and it may or may not manage to follow this rule consistently, depending on its handling of the numbers involved. Following a rule which says 'move borderline cases to the next
